

## NovaClear™

WaterGurus NovaClear™ is a black and grey water recycling system that uses expert water recycling technology to provide safe reusable water.

NovaClear™ black and grey water recycling system is designed and manufactured in Australia by WaterGurus. Developed with support from three leading universities, the NovaClear™ uses water recycling technology to provide safe reusable water.

### The System

The compact, lightweight, single-tank can be installed above or below ground. It is suitable to be installed in unsewered areas or where selected household reuse (in sewerred areas) has been approved. Check with your local council for full details.

Using WaterGurus patented MembraneSafe™ technology, all household wastewater (black and grey) is recycled to 99.99% germ-free water quality. Safe for you and your family, even your pets.

NovaClear™ is designed to recycle up to 2200 litres of wastewater per day. This is more than 10 times the allowance for the average person which is 200 litres per day.

### The NovaClear™ Difference

- Save water and money
- Plan and create your own sustainable environment
- Beat the drought and have a lush green garden
- Chemical free disinfection with membrane filtration
- Low energy consumption through efficient design
- Odour-free thanks to a full aerobic process
