

Pool Protect

Anti-evaporation liquid for pools

WaterGurus Pool Protect is a unique silicone-based liquid which spreads across the pool surface, forming a very thin film and greatly reducing evaporation.

Applications

Pool Protect is a completely natural product that is safe for the whole family. You can swim in your pool at any time. Pool Protect is virtually invisible on the surface.

- Pool Protect has no effect on sand or paper filter types.
- Pool Protect added to the surface of water bodies does not affect the chemistry of the water.
- Pool Protect does not prevent the water from oxygenation.

For a standard domestic pool with an area of 30 square metres, an application of 25 ml twice weekly during summer will be sufficient.

Pool Protect is available in a 500ml bottle.

Technical

Silicones are used in hundreds of applications including water-repellent sealers, hair conditioners and lipsticks. They are also used to reduce foam in commercial food applications and non stick sprays.

The concept of a monolayer is not new – it's been known for many years that some industrial alcohols can reduce evaporation in this way, but alcohols degrade very quickly.

Pool Protect uses the same concept, but with advanced materials to greatly improve its performance and longevity.

Pool Protect is a natural product that is safe for the whole family

Benefits

Evaporation is the single largest cause of water loss.

Every square metre of water surface loses about eight litres to evaporation every day in the warmer months.
