

Mains Connected Water Filtration Dispensers

KR600/KR800/KR1000

Our Mains Connected series of dispensers provide a complete environmentally friendly replacement for all bottled water dispensers. The WaterGurus units eliminate bottled water purchases as well as bulky delivery and storage of bottled water. These units can have up to five stages of filtration processes, ensuring a constant supply of water to the highest quality. The superior filtration process filters down to a thorough 0.01µm, removing everything from sediment to small bacteria that other filter systems let through. When the water is filtered, a Pi-Mineral water filter activates the purified water into healthy water by adding calcium, regulating natural minerals and changing the water to be slightly alkaline.

The systems are very easy to install.

Water Production*

MODEL	NAME	POWER	TANK SIZE
KR600	Standup Purifier	Compressor 88W Water Heater 500W	Hot-2.0L Cold-4.0L
KR800	Standup Purifier	Compressor 88W Water Heater 500W	Hot-4.0L Cold-8.0L
